

ASSIGNMENT

Problem Identification:

Machine Learning- Supervised Learning – Classification

No. of rows and columns:

399 rows × 25 columns

Preprocessing method used :

Nominal data -> One Hot Encoding

It is used for to convert categorical value to numerical value.

Final Model used here:

Categorical_NaiveBayes_Classification with Accuracy: 100%

	precision	recall	f1-score	support
0	0.99	1.00	1.00	150
1	1.00	1.00	1.00	249
accuracy			1.00	399
macro avg	1.00	1.00	1.00	399
weighted avg	1.00	1.00	1.00	399

F1 Score value :

f1_macro value for {'alpha': 1, 'fit_prior': True, 'force_alpha': True}: 0.9974953761738116

Comparing to all the models this models Accuracy and precision seems to be high. Thatswhy this model is choosen as final model
